

Draft — not yet reviewed by a lawyer. The process described here is the one the software actually supports. Whether it satisfies the deletion rights that apply where you operate has not been checked. See “Before this page goes live” at the foot.

Deleting your data

Last updated 28 September 2026

You can close your ZenoEats account yourself, at any time, and the personal information held with it is deleted. This page explains how, and what happens to your past orders.

Close it yourself

Sign in on any restaurant’s ordering page, open **Manage profile**, and under **Personal details** choose **Close my account** at the foot. It asks once more before doing anything, and then takes effect straight away, for every restaurant on ZenoEats at once. It cannot be undone. We send one email to the address on the account to confirm it is done, and none after that.

If you cannot sign in

Email PLACEHOLDER@example.com from the address you use to sign in, with the subject **Delete my data**.

Sending it from the address on the account is what lets us confirm the request is yours. If you cannot, say so in the message and we will ask you to confirm another way — we will not delete an account on the word of an address we cannot connect to it.

You will get confirmation within **PLACEHOLDER days**, and the deletion will be complete within **PLACEHOLDER days** of that.

If you signed in with Google, Apple or Facebook

Removing Zenoeats from your Google, Apple or Facebook account stops it being used to sign in, but it does not by itself delete what Zenoeats holds. Close your account from Manage profile first, or email us as above if you can no longer sign in.

What gets deleted

- Your sign-in details, which are held by our identity provider.
- Your name, email address, phone number and saved address on your Zenoeats profile.
- Your saved favourite items.
- Your ability to sign in. The account is closed.

What is kept, and why

Orders you have already placed and paid for are kept. They are the restaurant's business and tax record of a sale that happened, and both the restaurant and Zenoeats are required to be able to account for it.

A kept order still carries the name, phone number and address that were on it when it was placed, because that is what the record of the sale consists of. It is no longer linked to a usable account.

The payment itself is held by Stripe on the restaurant's account and is subject to the restaurant's and Stripe's own retention rules.

If you ordered as a guest

There is no account to delete. A guest record that never became an order is removed automatically after about 45 days. If a guest order was placed, it is kept as described above; email us if you want the contact details on it looked at.

Deleting one order

An individual paid order cannot be deleted on request, for the reason above. If something on it is wrong — a misspelled name, the wrong phone number — email us and it can be corrected.

Before this page goes live: this URL is what Facebook Login requires as its data deletion instructions, so it must resolve publicly before that app can go Live. Two things are needed beyond replacing the placeholders. First, a monitored mailbox and a named person behind it — a deletion page with no process behind it is worse than none, and the response windows above are a commitment. Second, the two routes are not the same kind of thing. Closing from Manage profile is automatic: it deletes the Clerk sign-in first, then the details and favourites, and keeps paid orders. The email route is a manual procedure a person carries out once the request is confirmed, by deleting the user in Clerk, whose `user.deleted` webhook runs the same removal. A lawyer should also confirm that retaining paid orders, and the contact details on them, is justified under the law that applies to you, and that the stated windows meet its deadlines. Delete this paragraph and the banner at the top once that is done.
